ABOUT

AWS Certified Solutions Architect and Cloud Practitioner (Final Year BE-IT) targeting DevOps Engineer and Cloud Engineer roles. Built production-grade CI/CD pipelines, Kubernetes-based microservices deployments, and fully serverless AWS architectures with measurable impact. Passionate about infrastructure automation, GitOps, and building scalable cloud-native systems using modern DevOps Practices.

EDUCATION

- **Bachelor of Engineering in Information Technology (2024-2027)**
At Lukhdhirji Engineering College Morbi, Gujarat – 8.13 CGPA (*Current Sem*)
- **Diploma in computer engineering (2021-2024)**
At Om institute of engg. & Tech. Junagadh, Gujarat - 9.72 CGPA

SKILLS

- **Cloud, Containers & Orchestration:** AWS, Docker, Kubernetes
- **CI/CD, Automation & Monitoring:** Jenkins, GitHub Actions, Prometheus, Grafana
- **Operating Systems & Networking:** Linux, TCP/IP, DNS, VPC Networking
- **Programming Language:** Java, JavaScript, Bash scripting, Python
- **IaC & GitOps:** Terraform, ArgoCD

CERTIFICATE

- **AWS Certified Solutions Architect- Amazon Web Services** [Dec 2025 - Dec 2028]
- **AWS Certified Cloud Practitioner - Amazon Web Services** [Oct 2025 - Oct 2028]
- **Galactic Problem Solver - NASA International Space Apps Challenge 2025**

PROJECT

- **Cloud-Native Food Ordering System:** ArgoCD • GitHubAction • Kubernetes • AWS • MySQL
 - Built and Dockerized a full-stack food ordering system (**React, Node.js, MySQL**) with JWT authentication, supporting multi-role access for customers and admins.
 - Implemented **CI/CD pipeline using GitHub Actions (CI) and ArgoCD (CD), cutting deployment time by ~60%.**
 - Deployed on **Kubernetes (AWS EC2)** with service-based communication and horizontal scalability across 3 microservices. **GitHub :** [jenish-chauhan/Jerry-s-chaska-Online-Food-order.git](https://github.com/jenish-chauhan/Jerry-s-chaska-Online-Food-order.git)
- **Cloud-Native Task Management System (AWS Serverless):** AWS • Cognito • Lambda • DynamoDb
 - Architected a fully serverless application using AWS (**S3, CloudFront, API Gateway, Lambda, DynamoDB**).
 - Implemented **secure user authentication via Cognito (OTP verification)**
 - Built scalable backend with **Lambda functions and DynamoDB, enabling low-latency data handling at scale.**
 - Secured APIs using **API Gateway with authentication integration...**[demo\(post\)](#)
